PRODUCE HIGH-QUALITY LAMPBLACK, ETHEREAL OIL; WILL BUILD SODA-PULP PAPER FACTORY

"METAN" FACTORY PRODUCES HIGH-QUALITY LAMPBLACK -- Zagreb, Vjesnik, 19 Jun 51

Kutina, 18 June -- Before the war, the "Metan" Factory produced only one grade of lampblack and that was poor quality. After the war, installations were rearranged and better grades produced, such as oil and gaseous lampblacks. Meanwhile, fine grades were still imported from abroad.

Recently, the "Metan" Factory mastered the production of the best grade of lampblack, P-33, which was formerly obtained from the US. Since the current price of this grade is about 230 dollars per ton, and Yugoslavia needs at least 100,000 tons for the rubber industry, printing ink, various dyes, and chemical factories, the production of fine lampblack is very important to Yugoslav industry. Production will soon be expanded to decrease its import as much as possible. The "Metan" Factory already exports some grades of lampblack, thus compensating to a certain extent for importing fine lampblack.

At present, an experimental section is in operation; this produces several hundred kilograms of fine lampblack daily. This section is to be expanded and production of larger quantities begun. The rubber factories in Borovo and Kranj report that the quality of the newly produced lampblack is as good as that imported from the US.

PLAN SODA-PULP PAPER FACTORY IN MAGLAJ -- Zagreb, Borba, 20 Oct 51

Tuzla, 19 October -- A month ago the "Tehnika" Construction Enterprise, which is building the cokeworks in Lukavac, began preparations for building the first soda-pulp paper factory in Yugoslavia. Construction is to begin in Maglaj early in 1952. Dwellings for workers and a 3.5-kilometer-long railroad are under construction now.

STAT

The raw material supply is very satisfactory. Previously imported sodapulp paper is to be produced from sulfate cellulose, which in turn is to be produced from the plentiful supply of sawmill waste.

The planning bureau of the paper industry in Ljubljana is accelerating its work on plans for machinery, while construction planning is being done by the planning bureau in Sarajevo. Scheduled beginning of construction depends on this planning being completed on time.

"AERO" FACTORY PRODUCES FIRST ETHEREAL OIL -- Zagreb, Borba, 19 Sep 51

Ljubljana, 18 September -- The "Aero" Factory has completed trial production of ethereal oil. Analysis has shown that oil obtained from medicinal plants grown on the "Gosada" Farm is good quality.

The "Gosada" Medicinal Plant Farm was established in 1947 in Ormoz, and today occupies 25 hectares. Soon it is to begin providing markets with various condiments, medicinal teas, and high-quality powdered foods for livestock. The farm is also successfully cultivating various medicinal plant seedlings for state farms and farm work cooperatives.

TO PRODUCE TANNIN EXTRACT FROM OAK GALLS -- Zagreb, Vjesnik, 14 Sep 51

Tannin extract is to be mass produced from oak galls instead of oak sap. Investigation has shown that tannin extract produced from oak galls is not unlike that produced from oak wood.

It is estimated that it will be possible to gather about 100 carloads of oak galls this fall in Slavonia and Baranja alone, thus saving about 800 carloads of oak wood.
